Education

University of California, San Diego

June 2025

B.S. Machine Learning and Neural Computation, Minor in Data Science and Supply Chain

Coursework: Data Structures & Algorithms, Machine Learning and algorithms, Data Visualization, Statistical Methods, Data Analysis, Deep Learning, Advanced Calculus, Linear Algebra

Skills

Languages: Python, Java, R, HTML, CSS, SQL, Matlab

Libraries: Pandas, NumPy, Flutter, Kafka, Airflow, Tableau, GCP, Github, Matplotlib, Scikit-Learn, Confluence, Excel, Pyspark

Technologies: Power BI, AWS, SQL Server, PostgreSQL, MySQL, Git, sqlite, Jupyter Notebooks, SSRS, Redshift

Activities: Social chair - Cognitive Science Student Association, ACM UCSD, Project Rishi - computer literacy.

Certifications

◦ **AWS Certified Solutions Architect – Associate**

Nov 2025

Experience

Software/AI developer

April 2024–September 2024

FindRightJob

San Diego, CA

- Designed, trained, and optimized machine learning and NLP models, achieving 90% accuracy in matching resumes to job descriptions.
- Built and optimized ETL workflows for large datasets (>5,000 entries), improving data processing speed by 35%.
- Designed and deployed automated data pipelines for structured and unstructured data ingestion using Python, Pandas, and APIs.

Instructional Assistant

Sep 2024–Dec 2024

University of California, San Diego

San Diego, CA

- Supported 400+ students in developing data preprocessing pipelines, feature engineering, and data analysis workflows.
- Led sessions on ETL concepts, Python scripting for data transformation, and query optimization with SQL.
- Collaborated with the teaching team on instructional materials, project evaluation, and course delivery.

Student Programmer

Dec 2023–Mar 2024

Reinagel Lab UCSD

San Diego, CA

- Built modular ETL scripts for multi-dimensional neuroscience datasets, improving data reliability by 25%.
- Translated MATLAB-based workflows to Python, enabling a 40% reduction in processing time and improving scalability.
- Performed data visualization and statistical analysis to interpret neural activity patterns.

App Developer

Jun 2023–Oct 2023

UCSD ITS

San Diego, CA

- Collaborated with cross-functional teams to optimize data delivery and system performance, reducing downtime by 30%.
- Contributed to backend integrations and QA testing pipelines for UCSD's campus app using AWS and SQL Server.

Projects

Prediction of Customers Affected by Power Outage

Jun 2024

- Preprocessed 1,534 outage records (55 features) using pandas/NumPy; handled missing data with probabilistic and region-based imputation.
- Performed EDA and hypothesis testing in Python to uncover climate and regional outage patterns.
- Trained RandomForestRegressor with GridSearchCV, reducing prediction error by 40%.

Song Popularity

Dec 2024

- Preprocessed 114K tracks using pandas, NumPy, and Spotify Web API; engineered features with TF-IDF and normalization.
- Engineered features with TF-IDF and normalization; trained XGBoost/LightGBM regressors, reducing RMSE by 8%.
- Evaluated model performance with cross-validation and RMSE; visualized results using matplotlib and seaborn.

Drone Optimization

Jun 2024

- Evaluate performance based on metrics such as efficiency, collision count, and success rate before and after reinforcement learning.
- Implement Deep Q-Learning for training drones to find optimal paths while avoiding obstacles.
- Develop drone navigation to autonomously navigate 3D mazes for efficient delivery.
